A Snapshot of Homelessness in the Colorado Balance of State Continuum of Care

2021 Homeless Point-in-Time Study Sheltered and Unsheltered Count

Acknowledgements

Regional PIT Coordinators

Regional Point-in-Time (PIT) Coordinators work to publicize the count and provide updated information about homeless programs in their region. Prior to and during the count, coordinators arrange and communicate with point people in each identified program. They provide training, coordinate surveyors and volunteers and distribute survey forms. PIT Coordinators also collect and organize all PIT forms to help compile the data quickly and efficiently.

The 2021 PIT count for the Colorado Balance of State Continuum of Care (CoC) would not have been possible without the hard work and dedication of our Regional PIT Coordinators and their many volunteers.

Region	Counties	Regional Coordinators
Northeastern Plains	Morgan, Logan, Sedgwick, Phillips, Yuma, Washington, Elbert, Lincoln, Kit Carson, and Cheyenne	Nicki Johnson – Help for Abused Partners Shelly Greenwood – Cooperating Ministries Kirstin Schelling – Centennial Mental Health Pam Hernandez – Rising Up Fort Morgan Marc Fortney – Centennial BOCES[1]

PIT Work Group

The Point-in-Time Work Group was established at the beginning of 2018 to work towards strengthening the Balance of State PIT counts. The 2021 PIT count benefited from the input and expertise of the following PIT Work Group members:

- Tyler Buck – Colorado Coalition for the Homeless
- Jahlia Daly – Office of Homeless Initiatives Colorado Department of Local Affairs
- Shawn Hayes – Colorado Coalition for the Homeless
- Beverly Lampley – Grand Valley Catholic Outreach

The PIT Work Group is looking for more members! Are you interested in participating in future regional PIT efforts as a Coordinator/Volunteer or in the Point-in-Time Work Group focused on the Statewide PIT effort? Contact: shayes@coloradocoalition.org.

Table of Contents

Introduction

Each year the Colorado Balance of State (BoS) Continuum of Care (CoC) conducts a Point-in-Time (PIT) study on homelessness in Colorado's non-metro and rural counties. This year the PIT count was held on the night of Tuesday, January 26th, 2021. The PIT count has two major goals:

- Conducting an unduplicated count of individuals and families meeting the HUD definition of homelessness
- Capturing information about demographic characteristics, disabling conditions, and sub-populations related to homelessness
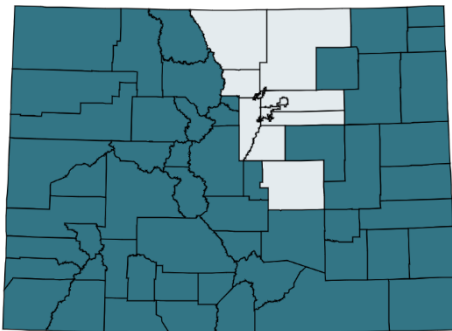

The CO BoS CoC covers 54 counties across Colorado.

The Balance of State CoC covers Colorado's 54 non-metro and rural counties. This includes all counties outside of metro Denver, Colorado Springs, and Northern Colorado. During the previous unsheltered PIT count in 2019, Northern Colorado was a part of the Balance of State CoC. In 2020, they were designated by HUD as a separate CoC[2]. Seventeen counties participated in the 2021 PIT count.

PIT counts are required to be conducted at least biennially by the United States Department of Housing and Urban Development (HUD) as a condition of applying for HUD homeless assistance funds. PIT counts are important because they are the only count conducted nationally each year, they provide data to quantify the scope of homelessness, and they help national, state, and local policymakers track progress towards the goal of ending homelessness.

Impact of COVID-19

The 2021 PIT count was conducted during the COVID-19 pandemic. While HUD required that the sheltered count be conducted as normal, there was some flexibility with the methodology for the unsheltered count due to the pandemic. CoCs could conduct observation-only counts, utilize shorter surveys, collect unsheltered data for up to 14 days, rely more heavily on sampling, and use Homeless Management Information System (HMIS) data or other datasets to supplement unsheltered data. In addition, CoCs that had conducted an unsheltered count in 2020 were able to opt out of the 2021 count. Because the Balance of State CoC had not conducted an unsheltered count in 2020, they did so in 2021. However, they utilized a longer data collection period (14 days) and allowed regions to collect data using a shorter, observational form if that was more feasible.

During the COVID-19 pandemic some shelters had reduced capacity because of social distancing requirements, and some individuals experiencing homelessness likely did not seek shelter due to fears of being near other people or because wearing a mask was challenging. With the COVID-19 pandemic, it should be noted that there may be many unforeseen impacts of pandemic response efforts on the number of people experiencing homelessness who were surveyed in this year's PIT count. Additionally,

---

[2] https://www.unitedway-weld.org/huds-new-designation-of-continuum-of-care-in-larimer-and-weld-counties/

given the vast geographic distances between counties in the Balance of State Continuum of Care, these impacts may look different across counties.

In addition to changes from HUD and potential unforeseen impacts, COVID-19 also meant that all trainings occurred online and the number of volunteers for the count was lower than in previous years. Many coordinators and agency staff members were overburdened due to the pandemic, and the time and effort they dedicated to the 2021 count is appreciated.

Methodology

During even numbered years, the CoC conducts a sheltered PIT count. During odd numbered years, the CoC conducts both a sheltered and unsheltered PIT count. In 2021, the CoC conducted a sheltered and unsheltered PIT count of individuals and families across the state. The PIT count was conducted in accordance with the HUD methodology guide[3] and the HUD data collection notice[4] for the 2021 count. The survey instrument was developed by the Colorado Coalition for the Homeless (CCH), in consultation with their research partner, OMNI Institute.

For the **sheltered count**, the CoC counted all individuals and families "living in a supervised publicly or privately operated shelter designated to provide temporary living arrangements (including congregate shelters, transitional housing, and hotels and motels paid for by charitable organizations or by federal, state, or local government programs for low-income individuals)" on the night designated for the count.

For the **unsheltered count**, the CoC counted all individuals and families "with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned buildings, bus or train station, airport, or camping ground" on the night designated for the count.

Regional PIT Coordinators throughout the state were responsible for planning and conducting the PIT count in their regions. CCH and the PIT Work Group provided training to all staff and volunteers, and Coordinators tailored additional trainings to meet their regions' specific needs. On January 26th service provider staff and volunteers administered the PIT survey to sheltered and unsheltered people experiencing homelessness in seventeen counties within the Balance of State region.

In previous years, all data collection was completed using paper survey forms. In 2021, an online survey was developed for the sheltered survey. The online survey was hosted on Survey123 and followed the same format as the paper survey. All participating agencies were provided with a link to the online sheltered survey. Agencies independently input their sheltered data into the survey form using this link. For unsheltered surveys, participating agencies used paper forms that were collected and reviewed by CCH, then entered for data processing by OMNI data specialists.

OMNI then carried out a thorough review of the PIT survey data. The research team performed numerous checks to identify data entry errors, logic errors, and duplicate surveys. A total of 42 people were

---

[4] https://www.hudexchange.info/resource/5768/notice-cpd-18-08-2019-hic-and-pit-data-collection-for-coc-and-esg-programs/

removed in the data cleaning process – 8 people were removed due to data quality issues (missing name, unclear household type, test data, etc.)[5] and 34 people were identified as duplicates and removed.

Observational Data

In some instances, volunteers completed a visual count of an unsheltered individual if they felt it was the best option not to disturb the individual or family. The observational survey included the following fields – county, city, day of observation, time of observation, exact location, number of people observed in household, description of person (e.g., physical appearance, clothing, unique identifiers, etc.), explanation for why the individual is thought to be homeless, and any known demographic information about the person. Observational surveys are not included in the data presented in this report because of the increased probability of duplication in the count and because not all PIT questions could be answered by observing an individual or family.

There were a total of 51 observed households with a total of 56 individuals in those households from Alamosa, Las Animas, and Huerfano counties.

- Of those with reported ages, 2 were between the ages of 18-24 and 42 people were over the age of 24
- Of those with reported gender, 12 were reported as female, 33 as male, 1 as transgender, and 1 as gender non-conforming
- Of those with reported race, 42 were reported as White and 2 as Black or African American
- Of those with reported ethnicity, 26 people were reported as non-Hispanic and 18 as Hispanic/Latino

There was also one shelter that was unable to conduct the sheltered PIT survey and instead provided a data extract with information about the age and gender of some of the individuals that were there on the night of the count. These individuals are not included in the data presented in this report because of the increased probability of duplication in the count and because not all PIT questions were answered.

There were a total of 11 observed households with a total of 11 individuals in those households from Montrose county.

- Of those with reported ages, 3 were between the ages of 25-54
- Of those with reported gender, 1 was reported as female and 10 as male
- There was no data available related to race or ethnicity

---

[5] Some domestic violence agencies did not collect information that could identify a person. Responses from these agencies were not removed if they were missing information.

Data Definitions

To create this report, the HUD-provided definitions were used to create several variables during the cleaning process. Table 1 contains a list of all variables that were created and their HUD definitions.

TABLE 1. VARIABLES CREATED

Variable	HUD-Provided Definitions
Household Types	
Households without children	Households with adults only. This includes households composed of unaccompanied adults (including unaccompanied youth age 18 to 24) and multiple adults (including households with multiple youth ages 18 to 24).
Household with at least one adult and one child	Households with (at least) one adult (including youth ages 18 to 24) and one child.
Household with only children	Households composed exclusively of persons under age 18, including one-child households, multiple-child households, or other household configurations composed only of children.
Youth	
Parenting youth	A youth who identifies as the parent or legal guardian of one or more children who are present with or sleeping in the same place as that youth parent, where there is no person over age 24 in the household.
Unaccompanied youth	Persons under age 25 who are not presenting or sleeping in the same place as their parent or legal guardian or their own children.
Chronically Homeless	
Chronically homeless person	A person who: Is homeless and lives in a place not meant for human habitation, a safe haven, or in an emergency shelter; and Has been homeless and living or residing in a place not meant for human habitation, a safe haven, or in an emergency shelter continuously for at least 1 year or on at least four separate occasions in the last 3 years where the combined length of time homeless in those occasions is at least 12 months; and Has a disability.
Chronically homeless household	A household with at least one adult or minor head of household who is identified as chronically homeless. For households with more than one person, if one household member qualifies as chronically homeless, all members of that household should be counted as chronically homeless.

Interpreting PIT Data

The PIT count provides a snapshot of homelessness on a single night in January. Due to the transient nature of the population and the large geographic area of the Balance of State region, it is extremely difficult to capture all individuals and families experiencing homelessness. In addition, there are likely unforeseen impacts on populations experiencing homelessness due in part to the COVID-19 pandemic itself and due to the response to the COVID-19 pandemic by Federal, State, and local entities. Because of this, the 2021 PIT count should be considered an underrepresentation of homelessness in the Balance of State region.

The PIT survey relies on self-reporting which may impact the data. Individuals may be unwilling to disclose certain information or may not realize that they meet the criteria for a specific condition. Many of the disabling conditions included on the PIT survey are stigmatized which may lead to underreporting.

Finally, changes in the homeless population year to year cannot be solely determined by examining PIT data. Each year, changes are made to the PIT methodology and survey forms. Additionally, local conditions such as the number of participating agencies, the number of volunteers, and unseasonably warm or cool weather can impact both the number of individuals who seek shelter and the number of individuals included in the PIT count. Because of this, caution is recommended when comparing PIT count data over time. Increases or decreases in the homeless population may be due to methodology or changes in local conditions instead of true changes in the number of people experiencing homelessness.

Snapshot of 2021 PIT Data

1,221 men, women, and children were experiencing homelessness in the Balance of State region in 2021

This map shows all the counties in the Balance of State region. The labeled counties represent where the 1,221 people experiencing homelessness were living during the 2021 PIT Count. **The counties with the largest share of people experiencing homelessness were Mesa (42%), Pueblo (17%), and Bent (9%).**

Findings

All data reported in this section are based on completed surveys. Given the limitations of the PIT count and the impact of the COVID-19 pandemic this data likely does not represent the entire population of people experiencing homelessness in the Balance of State (BoS) region. The true number of people experiencing homelessness is likely greater than what is reported here.

Across the BoS region, there were 1,221 homeless men, women, and children in 2021. Of these people, 472 were unsheltered and 749 were staying in emergency shelters and transitional housing programs. HUD groups individuals into one of three "household types" – households without children; households with at least one adult and one child; and households with only children. Children are defined as persons under 18. In 2021, the majority of households did not include children.

HOUSEHOLD TYPE

	Frequency	Percent
Household without Children	972	80%
Household with at least 1 Adult and 1 Child	246	20%
Household with only Children	3	<1%

Demographics

This section contains demographic information about people experiencing homelessness the night of the 2021 PIT count and provides comparison data from the Colorado BoS region. The BoS region data are from the 2019 Colorado Census. Throughout this section, only the demographic categories that matched between the Census and the PIT survey are included.

For the PIT survey, the head of household reported the age range for each household member - seniors (over age 55), adults (age 25-54), youth (age 18-24) or children (under 18). Because exact ages were not reported, average age cannot be reported. The majority of the people counted were adults 25 to 54 years old. A quarter of the population were seniors over age 55.

AGE

	Frequency	Percent
Seniors (age 55+)	300	25%
Adults (age 25-54)	686	56%
Youth (age 18-24)	85	7%
Children (age 0-17)	150	12%

The following graph compares the percentage of people surveyed who were seniors (over age 55), adults (age 25-54), youth (age 18-24), or children (under 18) in the BoS region and among people experiencing homelessness. Compared to the population in the BoS region, people experiencing homelessness on the night of the count were more likely to be adults or seniors. For example, seniors represent 18% of the region population but represent 25% of those experiencing homelessness based on the completed surveys.

Homelessness disproportionately impacts older people
Compared to the general population of the BoS region, people surveyed who are experiencing homelessness were more likely to be seniors or adults.

■ People Experiencing Homelessness   ■ BoS Region Population

Age Group	People Experiencing Homelessness	BoS Region Population
Seniors (age 55+)	25%	18%
Adults (age 25-54)	56%	47%
Youth (age 18-24)	7%	10%
Children (age 0-17)	12%	25%
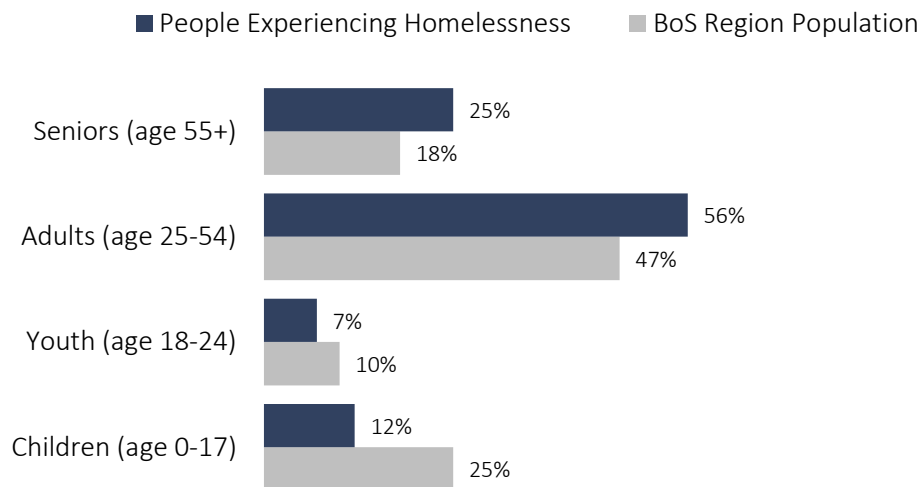

People surveyed who identified as male outnumbered the people surveyed who identified as female approximately two to one among those experiencing homelessness the night of the count.

GENDER

	Frequency	Percent
Male	780	64%
Female	422	35%
Gender Non-Conforming[6]	9	1%
Missing	5	<1%
Transgender	5	<1%

[6] Does not identify as exclusively male or female

The following graph compares the percentage of people surveyed who identified as male or female in the BoS region and among people experiencing homelessness. Please note that the Census does not provide data on individuals who identify as transgender or gender non-conforming. Because comparison data for the general population was not available, these gender identities are not included in the figure below.

Homelessness disproportionately impacts men
Compared to the general population in the BoS region, people surveyed who are experiencing homelessness were more likely to identify as male.

■ People Experiencing Homelessness ■ BoS Region Population

Category	People Experiencing Homelessness	BoS Region Population
Male	64%	51%
Female	35%	49%
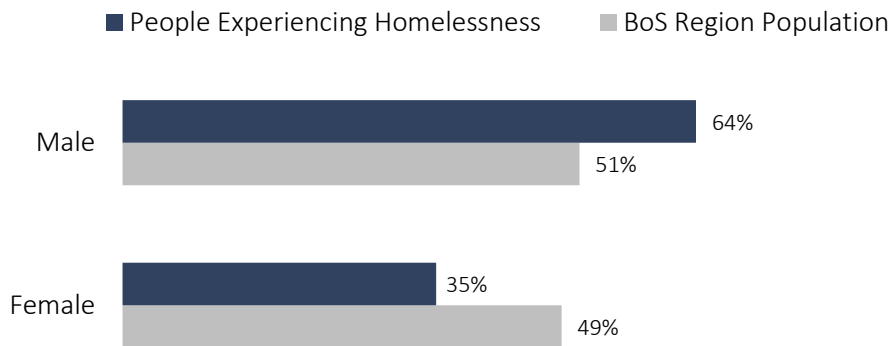

Approximately seventy-three percent of those counted reported their race as White and seventeen percent reported their ethnicity as Hispanic/Latino.

RACE

	Frequency	Percent
White	896	73%
Multiple Races	138	11%
American Indian or Alaskan Native	75	6%
Black or African American	56	5%
Missing	49	4%
Native Hawaiian or Other Pacific Islander	5	<1%
Asian	2	<1%

ETHNICITY

	Frequency	Percent
Non-Hispanic	968	79%
Hispanic	209	17%
Missing	44	4%

The following graph compares the race of people in the BoS region and among people surveyed who are experiencing homelessness.

Homelessness disproportionately impacts people of color
Compared to the general population in the BoS region, people surveyed who are experiencing homelessness were more likely to be multiracial, American Indian or Alaskan Natives, or Black or African Amer

Disabling Conditions and Sub-Populations

For each household member older than 18, the head of household reported the presence of serious mental illness, developmental disability, substance use disorder, HIV/AIDS, PTSD, brain injury, or chronic physical illness or disability. Seventy-five percent of the adults experiencing homelessness had one or more disabling conditions. The most commonly reported disabling conditions were PTSD and substance use disorder.

DISABLING CONDITIONS[7]

	Frequency	Percent
One or More Disabling Conditions[8]	800	75%
Substance Use Disorder	354	33%
PTSD	350	33%
Chronic Physical Illness/Disability	263	25%
Serious Mental Illness	202	19%
Developmental Disability	71	7%
Brain Injury	69	6%
HIV/AIDS	9	1%

Among the people counted the night of the PIT count, there were several small but significant sub-populations. Approximately one out of eight adults were currently fleeing domestic violence and about one in eleven were veterans.

12%	**9%**	**6%**	**<1%**
were currently fleeing domestic violence	were veterans	were unaccompanied youth	were parenting youth

---
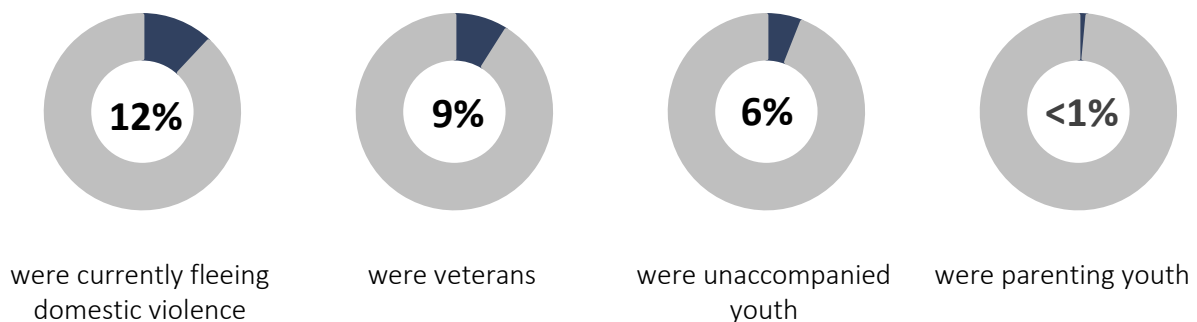

[7] Only includes adults over age 18 (n = 1071)

[8] Represents the percentage of respondents who reported one or more disabling conditions (serious mental illness, developmental disability, substance use disorder, HIV/AIDS, PTSD, brain injury, or chronic physical illness/disability)

SUB-POPULATIONS

	Frequency	Percent
Currently Fleeing Domestic Violence[9]	124	12%
Veteran[9]	98	9%
Unaccompanied Youth	75	6%
Parenting Youth	2	<1%

Close to half of individuals met the definition of chronically homeless. The percentage of people who were chronically homeless among veterans was larger than the percentage across the entire counted population.

43%
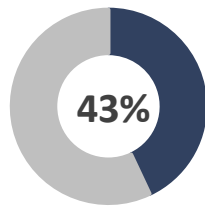

of individuals were chronically homeless

49%
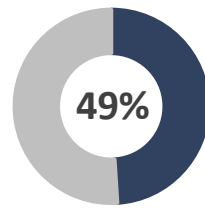

of veterans were chronically homeless

CHRONIC HOMELESSNESS

	Frequency	Percent
Chronically Homeless Individuals	531	43%
Chronically Homeless Veterans[10]	48	49%

---

[9] Only includes adults over age 18 (n = 1071)
[10] Only includes veterans (n = 98)

Conclusion

The 2021 Point-in-Time (PIT) count was a success due to the hard work and dedication of staff and volunteers across Colorado. It is extremely difficult to gather PIT data due to the large geographic area of the Balance of State region and the transient nature of people experiencing homelessness. In addition, the COVID-19 pandemic created additional challenges for the 2021 PIT count.

While the 2021 PIT count should be considered a conservative estimate of the extent of homelessness in the region, the count provides valuable information about the people experiencing homelessness on the night of the count. There are many takeaways from the data contained in this report including:

- 1,221 homeless men, women, and children
- 20% were families with children
- 19% were under the age of 25
- 75% reported at least one disabling condition
- 43% were chronically homeless
- 12% were currently fleeing domestic violence
- 9% were veterans

The 2021 PIT Report also highlighted racial, age, and gender inequalities among those experiencing homelessness. American Indian/Alaskan Native people, Black or African American people, and Multiracial people make up a disproportionate amount of those experiencing homelessness compared to the population in the Balance of State region. People who identify as male and older people were also overrepresented among those experiencing homelessness.

Additional data is included in the appendices. Appendix A includes information on household type, veteran status, disabling conditions, and chronic homelessness for each county and entitlement city. Appendix B provides a summary of the PIT data for each county. Appendix C provides a summary of the PIT data for each entitlement city. There are two entitlement cities in the BoS region, Grand Junction and Pueblo. For the 2021 PIT Count, all data that was collected in Mesa County was collected in the city of Grand Junction and all data that was collected in Pueblo County was collected in the city of Pueblo. Because of this, the data reported for these counties and entitlement cities are identical throughout the appendices.

The 2021 PIT count provides required data for federal funding through the HUD Continuum of Care program. The data included in this report will be used by the Colorado Balance of State Continuum of Care and other stakeholders to inform additional outreach, service and program planning, and policy decision making as they work to address homelessness.
